Why MSP PASàPAS Selected SecurityBridge To Protect Customers' SAP Systems

With headquarters in France and customers worldwide, managed service provider PASàPAS, a Talan company, enables companies to unleash their development potential through digital transitions. The company improves the operational efficiency of its customers' SAP systems through five businesses: cloud technology services, consulting and integration, support and expertise, analytics, data and BI, and customer experience.

PASàPAS excels by helping small to midsize enterprises (SMEs) design SAP systems or convert existing SAP systems to S/4HANA. The company's expertise is in demand as many SMEs don't have large-scale IT teams, and fewer have the cybersecurity expertise to protect their SAP system adequately.

"Many of our clients find managing SAP complicated and confusing," said Matthieu S., SAP Architect at PASàPAS.

> "We needed a complete solution that covered all aspects of SAP cybersecurity, is easy to understand, and reasonably priced."

PASàPAS realized their customers' unmet need to address SAP cybersecurity fully but also understood that having a third-party solution to fill the security gaps would be beneficial. In addition to lacking an adequate, native SAP cybersecurity solution, PASàPAS realized that creating a cybersecurity solution would be time-consuming and expensive. So instead, they partnered with an established organization that knew how to harden SAP environments and reduce attack surfaces from hackers.

PASàPAS searched for an SAP security tool that could help its customers. Unfortunately, many of the company's reviewed solutions were costly and difficult to implement.

The SecurityBridge platform offers comprehensive solutions for maximum visibility into the intricate nature of SAP systems through real-time threat monitoring. What sets them apart from other solutions is their proactive, behavior-driven methodology, enabling:

- Early detection of anomalies and Zero Day threats.
- An efficient approach for security risk mitigation.
- Automated SAP security process at a minimal cost.
- Assurance of compliance with regulatory mandates.
- Evolution of a comprehensive cybersecurity posture.

"With SecurityBridge, we can identify, qualify and stress the urgency of particular cybersecurity issues."

Matthieu S. sees SecurityBridge as a natural extension of PASàPAS' existing SAP services, and as a result, the solution became their primary tool used to advise customers on SAP cybersecurity risks.

"Our customers often make uninformed decisions that lead to unnecessary SAP vulnerabilities. From day one, we have been able to use SecurityBridge reports to alert our customers of their risky behaviors – it's a complete SAP cybersecurity solution," Matthieu S. concludes.

PASàPAS will continue to leverage and install SecurityBridge's cybersecurity platform for SAP to help more SME organizations understand and mitigate the risk of hackers breaching their networks and stealing, damaging, or holding data hostage.
